NEXO AI

MCP PLATFORM FOR ERP

Talk to your ERP. Decide with real data.

NEXO AI connects Claude, ChatGPT and any MCP-compatible assistant directly to SAP Business One and Odoo. Ask in natural language, get verified figures from your database and prepare documents, with no exports, no copy-paste and no exposed credentials.

Read-only by design | Multi-company with full isolation | OAuth 2.1 · PKCE | SAP B1 · SQL Server & HANA | Odoo 16/17

71
Curated datasets for SAP B1 and Odoo

39
MCP tools governed by plan and role

4
Connectors: SQL Server, HANA, Service Layer, PostgreSQL

0
Credentials exposed to the AI assistant

BENEFITS

What your company gains with NEXO AI

TIME

Answers in seconds

Questions that used to take days of reporting are answered instantly, in plain language.

TEAM

Less load on IT and analysts

Frees the technical team from ad-hoc queries and reports so it can focus on high-value projects.

COSTS

Lower reporting costs

Cuts consulting hours, custom report development and manual Excel exports.

REVENUE

Decisions that sell more

Receivables, stock and sales alerts to act early: collect on time, avoid stockouts and spot opportunities.

THE CHALLENGE

The information lives in the ERP. Decisions are made elsewhere.

01

Slow answers

Every new question is a ticket to IT or a hand-written query. The decision waits for the report.

02

Data out of control

Excel exports pasted into public chats: no traceability, no permissions, no isolation between companies.

03

AI disconnected from the business

Assistants reason very well, but without governed access to your ERP they can only guess, not answer.

HOW IT WORKS

A governed bridge between AI and your ERP

1

Connect your ERP once

SAP Business One on SQL Server or HANA, Service Layer for documents, or Odoo. Encrypted credentials and a read-only user.

2

Authorize your AI assistant

Add NEXO AI as a connector in Claude, ChatGPT or any MCP client with OAuth 2.1. Each user signs in with their own identity, company, role and permissions.

3

Ask, analyze and act

The assistant picks the right tool: curated dataset, validated query, dashboard or document draft with human confirmation. Everything is audited.

NEXO AI

Much more than questions and answers

Curated datasets

Sales, receivables aging, purchasing, stock per warehouse, inventory valuation, P&L, trial balance, cash and banks, with date, branch, salesperson and currency parameters.

Safe dynamic queries

When no dataset fits, the AI generates read-only SQL that NEXO validates, translates to HANA or PostgreSQL and limits before running.

Dashboards and BI-ready data

The AI drafts dashboards and a human publishes them. Endpoints ready for Power BI, Looker and other tools.

Executive summaries

Daily, weekly or monthly summaries with key metrics and variations, delivered to management.

Business alerts

Rules on any dataset: overdue receivables, stock-outs, sales drops. Scheduled evaluation and notifications.

Smart insights

Proactive analysis of customer, collections and inventory risk, and commercial opportunities.

Document Assistant

SAP B1

Prepares sales and purchase orders from a conversation, with preview and explicit confirmation. Always as drafts: final approval stays in SAP.

Works with your favorite AI

Claude, ChatGPT, custom MCP clients and WhatsApp. No lock-in to a single provider and no model training on your data.

Ready in hours, not months

Sales, purchasing, inventory, finance and banking catalog from day one. Import your SAP B1 Query Manager queries in one click.

Designed so IT says yes

- ✓ Guaranteed read-only: the validator blocks INSERT, UPDATE, DELETE, DROP and sensitive tables.
- ✓ Per-company isolation at every layer, with the company ID signed in the token.
- ✓ Granular roles: Admin, Analyst, Viewer and Document Preparer.
- ✓ Safe mode per connector and encrypted credentials the assistant never sees.
- ✓ End-to-end auditing: who asked, from which assistant, which SQL ran and which draft was created.
- ✓ Timeouts, rate limits, circuit breakers and row limits per query.

NEXO AI

Frequently asked questions

What is NEXO AI?

It is an MCP platform that connects Claude, ChatGPT and any MCP-compatible AI assistant to SAP Business One and Odoo data, so you can ask in natural language and get verified figures from your database.

Which ERPs does it support?

SAP Business One on SQL Server or HANA, with Service Layer for documents, and Odoo 16 and 17.

Is it safe to connect AI to my ERP?

NEXO AI is read-only by design, uses OAuth 2.1 with PKCE, keeps credentials encrypted and never exposes them to the assistant. It is multi-company with full isolation, role-based permissions and auditing.

Can it create documents in SAP?

Document Assistant prepares purchase and sales drafts with preview and human confirmation. Final approval always happens in SAP.

LET'S TALK

Connect your ERP to AI this week

Demo with your own data in an isolated environment. Nothing to install in SAP or Odoo: a read-only user is enough to start.
