BROCHURE

NovaPOS

POINT OF SALE · STORE LOCATOR · MULTI-STORE · SAP BUSINESS ONE

Your customers no longer ask where it is. They find it.

NovaPOS brings together checkout, self-service and an interactive map of your store that guides each customer to the product, with an animated route, voice search and a shopping list. And it connects all your branches as if they were one, linked to SAP Business One.

- Interactive store locator
- Works offline
- Multi-store and multi-register
- Integrated with SAP Business One
- Installable apps

3	60 s	0	SAP
Ways to search: text, barcode or voice	Sync between branches when online	Sales stopped when the internet goes down	Documents posted to SAP Business One with retries

BENEFITS

What your company gains with NovaPOS

TIME

Shorter lines

Fast checkout and payments, with prices and promotions applied automatically.

TEAM

Closings without overtime

Automatic cash counts and register closings, with no manual reconciliation at day end.

COSTS

Fewer shortages and gaps

Inventory and cash controlled by user and shift reduce losses and errors.

REVENUE

No lost sales

Stock from other stores in view and a single customer across channels to sell more and build loyalty.

THE CHALLENGE

The customer can’t find it, the branch doesn’t have it, the register doesn’t balance.

01

“Where is…?”

The customer looks for an employee or leaves without buying. And the floor team is constantly interrupted.

02

“We’re out”

Another branch has the product, but no one can see it. The customer can only pay and pick up where they bought: a lost sale.

03

Manual accounts

Register closings with manual math, inter-store balances in spreadsheets and a checkout that stops when the internet goes down.

HOW IT WORKS

Draw your store. The system does the rest.

1

Draw aisles and sections

In a visual editor in the admin panel: drag aisles, refrigerated areas, sections, checkouts and the entrance on a grid, with color and icon.

2

Assign item groups

“Dairy” to aisle 7 and you’re done: all its products are located. Exceptions are set per item, with side and shelf.

3

Import or print

Load locations from a CSV and print the “You are here” QR codes to stick on each shelf. No technical plans or outside vendors.

NOVAPOS

A shopping assistant on every screen

The self-service kiosk is also a guide: the customer searches for a product and instantly sees its aisle, side and shelf, with the route drawn from where they stand.

Beacon and animated route

New

The product's zone pulses like a beacon and the path is drawn in neon, around the shelves, from "You are here" to the product.

Search by voice

New

Text, barcode or voice. The customer says "skim milk" and the map shows it, without typing.

"You are here" with QR

New

Each aisle has a QR code. When scanned, the map knows where the customer is and recalculates the route from there.

Smart shopping list

The customer picks several products and the system orders them into a single walk, with no back and forth.

"Also in this aisle"

Shows other products in the same zone: more discovery and a higher average ticket.

From the map to the cart

Photo, price and an "Add to cart" button on the same screen. Finding and buying is a single gesture.

NOVAPOS

Imagine a screen on every cart

In cart mode, the screen stays on the locator and goes with the customer throughout the store: their list, the next product and the route.

Always at hand

Cart mode

A tablet on the cart is enough: open the cart mode address and it's ready, with nothing special to install.

Faster shopping

Less time searching means more customers served per hour and fewer "where is...?" lines.

A memorable experience

A store that guides its customers with a neon map is unlike any other. It's differentiation visible from the entrance.

NOVAPOS

All your branches, one single store for the customer

Each store keeps selling even if the internet goes down. When online, a central server syncs them every minute, without selling the same balance twice or delivering the same order twice.

Who has it?

Multi-store

From the register you can see the stock of other branches, and request goods from another store with approval and dispatch.

Buy here, pick up there

The customer pays at one store and picks up at another. The delivering store records it and the selling store sees it on its next sync.

Pay at any branch

Credit invoices from one store can be collected at another, with a receipt. Plus a global credit limit per customer across all stores.

Clear accounts between stores

Settlement report: who owes whom for balances used, collections, pickups and transfers. Exportable to CSV.

NOVAPOS

Everything your store needs, from checkout to stockroom

Modules you turn on according to what each store needs. What isn't enabled stays out of the way.

Fast checkout

Invoices, credit notes, deliveries, returns and orders in a single panel, with scanner and gapless numbering per register.

Kits and combos

Boxes built by the customer (for example, 6 donuts of their choice) with exact unit control.

Points and promotions

Points earning and redemption, special prices and promotions per customer.

Multi-currency

Payments in several currencies with the daily rate and configurable decimals, validated on the server.

X and Z closing

Partial and final closing with count by denomination, differences by currency and an optional blind close. PDF and Excel.

Daily reconciliation

Sales, collections, returns and movements with the same numbers on screen, in PDF and in Excel.

Home delivery

Sell today, deliver later: inventory drops on delivery, with a delivery note and tracking.

Purchasing

Receiving matched against the purchase order, tolerances, approval of differences and returns to vendor.

Transfers

Dispatch and receipt between stores with a transit warehouse, printable waybill and requests with approval.

Floor salesperson

The salesperson builds the order on their phone and generates a QR code the register scans to charge instantly.

Self-service

Full-screen kiosk: the customer identifies, builds their order and pays at the register. It resets on its own.

Price checker

A lookup screen for the sales floor: scan and see the price, without logging in.

Flexible items

Several barcodes per product and automatic replacement of discontinued items when scanned.

SAP Business One

Documents are saved in the store first and posted to SAP when online, with automatic retries.

Installable apps

Register, Floor, Admin and kiosks install as apps (PWA) from the same site, with guided HTTPS.

NOVAPOS

Omnichannel with InSales

Counter, sales force and B2B portal working as a single channel.

One catalog

Omnichannel

The same products, prices and promotions across every channel.

One customer

Full customer history no matter where they bought.

One inventory

Stock shared with warehouses and with InStock WMS to replenish on time.

What changes with NovaPOS

- ✓ The customer can't find a product: they locate it on the map and follow the route, instead of leaving without buying.
- ✓ This branch is out of stock: you see who has it, request it or sell it for pickup there.
- ✓ The customer wants to pay at another branch: they pay at any store and the invoice updates itself.
- ✓ The internet goes down: you keep selling and everything syncs when the connection returns.
- ✓ Accounts between branches: automatic settlement report, no spreadsheets.
- ✓ Register closing: X/Z closing with the full picture, differences by currency, PDF and Excel.

NOVAPOS

Frequently asked questions

What is NovaPOS?

It is a multi-store, multi-register point of sale connected to SAP Business One, fast for the cashier and fully controlled for management.

What is the NovaPOS store locator?

It is an interactive map of your store on the kiosk, the price checker or a tablet on the cart: the customer searches by text, barcode or voice and sees the product's aisle, side and shelf, with an animated route from where they stand. You draw the layout yourself in the admin panel.

Does it keep selling if the internet goes down?

Yes. Each store keeps selling offline; when the connection returns, it syncs with the central server and documents are posted to SAP Business One with automatic retries.

Which payment methods does it accept?

Cash, cards, transfers and split payments in a single sale, with multiple currencies.

How does it handle register openings and closings?

It records opening float, cash counts and closings per cashier and shift, with differences identified, and syncs sales and closings with the ERP.

Does it integrate with InSales?

Yes. It shares catalog, customers and stock with InSales and SAP Business One for an omnichannel operation.

LET'S TALK

Turn your store into an experience

We will show you the locator working with your own store layout, cart mode and operations across branches.
